

# Changelog DDC\_U v125

07.10.2020

## Features:

- Improved Firmware for less power consumption and better stability for synchronization
- the maximum number of tests for the initial phase check can be set in the config file
- For each initial phase check (during start of the control software) a logfile is created under C:\.

## Bugfixes:

- BBC overflow status is now correctly reflected in the power readings
- BBC gain control stable towards bad power readings
